All plant bed, shrub and tree location

Contractor for Landscape Architects

General Contractor is responsible for

all erosion control measures during

topsoiled and seeded or sodded, as

double-shredded hardwood mulch or

mulch to Landscape Architect. Mulch

plant materials as shown on plan and

approved equal and Contractor is

responsible for providing samples of

indicated in the planting plan.

14. It is the intent of this contract to

avoid any disturbance to existing

trees or shrubs on site other than

those specifically designated for

15. Liquidated damages for trees damaged

by construction operation shall be

16. During construction, and until the end

are showing signs of stress as

determined by the Landscape

Architect are to be deep root

fertilized, two injections per caliper

inch per tree at 18" - 24" depth with Peter's 20/20/20 fertilizer or

Landscape Architect approved equal.

\$500 per caliper inch. Shrubs shall be

of warranty period, existing trees that

transplant or removal.

\$100 each.

shall be staked in the field by

approval prior to installation.

10. Adjustments to plant beds shall be approved by Landscape Architect.

12. All disturbed areas are to be

Mulch shall consist of

Standards for measurement of

nursery stock.

Proposed methods, and schedule for effecting tree and plant protection shall be submitted

Proposed methods, materials, and schedule for root pruning, construction pruning, and tree fertilization shall be submitted for Certain specimen trees adjacent to

construction areas and in other key locations will be identified by the Owner and the Architect, and marked with red tags. Loss of any of these trees will result in fines assessed at \$5,000 per tree. Damage to all other trees on the property will be assessed at the rate of \$500 per inch caliper of the tree. A fine of \$1,000 will be levied against the Contractor for each incident of construction inside tree protection areas. Damages to trees, shrubs, and other

vegetation will be assessed by the Architect and Owner in accordance with the International Society of Arboriculture (ISA)

Trees or roots visibly damaged will cause the Owner to withhold from the Contractor an assessed amount conforming to the requirements stipulated above for a period of two years. After that period the impact of the damaged to any tree will be assessed

If any trees or shrubs designated to be saved are damaged and replacement is required, a number and diameter of trees or shrubs of the same species and variety, as specified by the Owner and Architect, shall be furnished and planted by the Contractor. The total inch diameter of the replacement trees or shrubs shall equal the diameter of the tree or shrub to be replaced. The Contractor shall not be liable for any loss or damage which occurs while the Contractor is complying with instructions given by the Owner, Architect, or arborist working on the Project.

The Contractor's attention is called to the fact that certain areas on the site exist as natural woodland spaces and are to remain as natural woodlands. Therefore, all construction operations must be performed in such a manner, which will preserve these existing natural environments as wood Designated areas of trees, understory, and

wildflowers are to remain untouched and Clearly mark all clearing limits in the field and accompany Architect on a joint review of clearing limits before clearing operations have commenced. Limit of clearing is generally defined as the limit of grading.

12. Prior to start of demolition work and clearing and grubbing operations, tree protection fencing shall be installed in accordance with

13. Fencing shall be installed at the tree protection areas indicated on the Drawings. 14. Fencing shall be installed a minimum of 15 feet beyond the drip line of the trees to be protected, unless otherwise approved by the

15. Where construction will be in close proximity to existing trees designated to remain, roots shall be pruned. Proximity shall be as determined in the field by the Landscape Architect or Arborist. Suitable means for root pruning

jet pruning. Any method which tears roots or disturbs the soil beyond the grading limit is Trees to receive root pruning shall be reviewed by an arborist for canopy pruning, fertilization and trench backfill

18. Selective clearing within tree protection areas shall only be performed when and as directed by the Landscape Architect. Refer to Section 02115, selective clearing.
